Western Sydney Airport

The **Australian Department of Infrastructure \$2.5b** project to build a second airport for Sydney is one of the most high profile infrastructure developments in Australia – attracting some 5,000 EIS submissions. The entire process was managed through CM to maximise inclusiveness, simplify procedures, and maintain high public and client confidence throughout.

Sunshine Coast Airport (SCA)

The **\$347m expansion** of Australia's fastest growing airport will deliver an additional runway and infrastructure upgrades for a catchment area of 600,000 people. CM was used to manage the **900 EIS submissions**, allowing SCA to better understand and address areas of concern.

PFC Environmental Management Program

A **Department of Defence** investigation into the PFC contamination of **18 sites across Australia**. CM is currently being used to manage the high volume of enquiries from community, government and industry, enabling Defence to take a responsible and transparent approach.

Toondah Harbour

The **\$1.39b revitalisation** project by **Walker Group** will transform the **67-hectare waterfront site** into a dynamic, world-class tourism destination. As part of a comprehensive community engagement program, CM will manage the sensitive EIS submission process to maintain positive community and local government support.

Carmichael Coal Mine and Rail

\$16b Adani Greenfield mine and rail project attracted over **14,400 EIS submissions**. CM was a key risk mitigation measure, used to manage the process quickly and efficiently on a highly contentious project.

ACT Water Security Program

The **\$300m ACT Government** project aims to 'future proof' water supply for Australia's capital. CM managed submissions from a range of stakeholders across several projects - the significant reduction in manual handling of data ensured timely response to issues.

Townsville Airport

A **\$42m 10-year redevelopment** to accommodate a **1.1m increase** in passengers by 2038. CM was used to manage the EIS submission process, providing accurate and timely information - vital to the initial phases of the project.
